Commercial Security Systems

Control Panels

Our robust commercial fire and burglary panels seamlessly integrate with access control, CCTV, long range radio, Internet alarm communications and video surveillance. Integrated door control provides a unique combination of security and access control features.

Graphic Touchscreen Keypads

A blend of head-turning style and sophisticated design, graphic touchscreen keypads let you train your employees in minutes. Available in black and white and color interfaces, you and your employees can control security, operate lights, schedule events and much more — with ease.

Motion Detectors

From traditional PIRs to Dual Technology Sensors, we have a motion detector to suit your business. From hardwired and wireless to V-Plex polling loop, we offer a selection to solve any installation challenge.

Video Controllers

Take advantage of the latest digital video technology by using a video controller to deliver local and remote video monitoring. From a monitor, Symphony touchscreen or computer, you can view cameras around your business as well as recorded video of specific events.

Components of a Commercial Security System

Reliable Communication When You Need it Most

In a fire or burglary emergency, a traditional system seizes the phone line and dials the central station for assistance. If the phone lines are intentionally cut, how will the alarm signal get through? That's when AlarmNet's got you covered.

Honeywell's AlarmNet has been the nationwide leader in alarm communications technology since 1986. AlarmNet's commercial burglary and fire services are reliable alternatives for the transmission of alarm signals. Offering extensive coverage, their services meet UL High-Line Security requirements for jewelry stores and banks and listings for commercial fire right out of the box, getting the approval of AHJs nationwide.

Keypads

Whether you choose a wired, wireless or talking keypad, each Honeywell keypad offers easy-to-use solutions that put security at your fingertips while reducing false alarms and training time.

Glassbreak Detectors

Rely on the industry's most versatile glassbreak detector as a first line of defense. Offered in hardwired, wireless or V-Plex looping technology, our glassbreak line is extremely reliable and keeps intruders where they belong: outside your place of business.

Door and Window Sensors

A variety of sensors are available for any type of door or window to detect break-ins.

Warning Sounders

From sirens, to horns, to bells, we will choose the right device to warn of a fire, burglary or emergency.

A Variety of Communication Technologies

AlarmNet provides cost-effective communication solutions for commercial burglary and fire applications, supported by a variety of products and services. Choose from radio technology, cellular or Internet to deliver the alarm signal from your business.

The Signal Path

No matter what technology you choose, all alarm signals are processed through AlarmNet's Network Control Center. Supervised 24 hours a day, your signal is relayed to the central station to protect your business 365 days a year.
